

Pizza Garden!

In your pizza garden you have the following plants:

When you get home, place your pizza garden pot by a sunny window. Water the plants about 2 times a week with a small amount of water - just enough to keep the soil moist but not so much that it's soggy. When the plants are growing you can use sharp scissors to cut leaves from the basil, oregano, and garlic to flavor your pizza. Wait for the tomatoes to turn red before picking and eating them.
